

Securing a guitar in a Euro Traveller / Club Europe / World Traveller seat

Securing your guitar will need additional boarding time. To help avoid a delay to your flight, please check information screens and make your way to your departure area as soon as the gate number is announced. Then please make yourself known to the airport staff at your gate.

Please note

Guitars can only be secured in a window seat that is not on an exit row or a seat in the front row (bulkhead) of a cabin. The seat must be in the upright position with the armrests down for the duration of the flight.

- Step 1** Place your guitar on the seat at an angle with the neck pointing down. The case should not protrude above the top of the seat. The main body of the case should be resting on the seat with the neck extending down towards the footrest, but not touching the floor.
- Step 2** Thread the seat belt through the handle of the guitar case and secure it in place around the body of the case. If it isn't long enough, ask your crew for an extension seat belt. Attach the extension seatbelt to the existing seatbelt and fasten securely around the shoulder of the guitar. Adjust as necessary to secure the guitar into the seat so it doesn't move excessively and there is no chance of it slipping off the seat during the flight.
- Step 3** Please ask your crew to check your guitar is properly secure. It is a good idea to check the fastenings at regular intervals through the flight and ensure that the seat remains in the upright position at all times.

Your cabin crew member will be happy to provide any additional assistance if required.

Securing your guitar in a World Traveller Plus seat

Securing your guitar will need additional boarding time. To help avoid a delay to your flight, please check information screens and make your way to your departure area as soon as the gate number is announced. Then please make yourself known to the airport staff at your gate.

Please note

Guitars can only be secured in a window seat that is not on an exit row or a seat in the front row (bulkhead) of a cabin. The seat must be in the upright position with the armrests down for the duration of the flight.

- Step 1** Extend the leg rest of the seat and place your guitar on the seat at an angle with the neck pointing down. The case should not protrude above the top of the seat. The main body of the case should be resting on the seat with the neck supported by the extended leg rest.
- Step 2** Thread the seat belt through the handle of the guitar case and secure it in place around the body of the case. If it isn't long enough, ask your crew for an extension seat belt. Attach the extension seatbelt to the existing seatbelt and fasten securely around the shoulder of the guitar. Adjust as necessary to secure the guitar into the seat so it doesn't move excessively and there is no chance of it slipping off the seat during the flight.
- Step 3** Please ask your crew to check your guitar is properly secure. It is a good idea to check the fastenings at regular intervals through the flight and ensure that the seat remains in the upright position at all times.

Your cabin crew member will be happy to provide any additional assistance if required.
